

Java

```
class Solution {  
    public String convert(String s, int numRows) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {string} s  
 * @param {number} numRows  
 * @return {string}  
 */  
var convert = function(s, numRows) {  
  
};
```

C++

```
class Solution {  
public:  
    string convert(string s, int numRows) {  
  
    }  
};
```
